## INSPIRING YOUTH TO PURSUE CAREERS IN SCIENCE, TECHNOLOGY, ENGINEERING AND MATH:

As innovators in linear and curvilinear motion technology, we believe in the power of imagination, and we hope that our participation with *FIRST* inspires younger generations to discover their own innovation.

**What is *FIRST*?** An organization that gives students a chance to design and build robots and then compete against other teams on local and national levels. The contest encourages youth to think critically and solve real-world engineering problems. The skills they learn in *FIRST* can carry over to their later career.
